END-TO-END WEBSITE & DIGITAL PLATFORM

PRODUCT REQUIREMENTS DOCUMENT (PRD)

Main corporate profile + approved website scope + recommended add-ons + delivery plan

Brand: Coral Swift / CoralSwift Technologies
Brand line: Connecting Global Opportunities with Delivery Excellence
Version: 2.0 – Consolidated master PRD
Status: Draft for business and technical validation

This document uses the uploaded Coral Swift Corporate Profile as the business-content baseline, incorporates the previously discussed website requirements and adds end-to-end product, technical, operational and launch requirements.

Prepared for: Business owners, product/design team, developers, QA, operations and implementation partners.

Document Control and How to Use This PRD

Item	Definition
Source of truth	Uploaded Coral Swift Corporate Profile (business positioning, service portfolio, proposed criteria, pathways and disclosures).
Design reference	The CoralSwift logo supplied in the conversation; logo colours inform the proposed digital palette.
Scope	Public website, enquiry workflows, partner application portal, admin console and future-ready integrations.
Validation rule	Any legal, geographic, partner, project, financial, certification or historical claim must be verified before publication.
Release strategy	Deliver in phases. Launch the public website first; activate portal and admin workflows after process owners are assigned.

Terminology: The corporate profile uses “Coral Swift”; the supplied logo uses “CoralSwift Technologies”. Confirm the exact legal and public-facing brand name before launch. This PRD uses “Coral Swift” for the business profile and “CoralSwift” when referring to logo styling.

1. Executive Summary

Coral Swift is presented in the source profile as a US-oriented IT and Non-IT project solutions and partnership platform connecting international project requirements with qualified delivery organizations in India and other markets. The proposed operating model combines project sourcing, vendor qualification, delivery coordination, governance and long-term business partnerships.

The digital platform will establish the corporate presence, explain the service and partnership model, capture business and partner enquiries, support qualification workflows and provide a foundation for future project coordination.

The source profile describes this as a business-development draft and states that company registration, geographic operations, partnership relationships and historical project allocations require documentary confirmation before external publication.

Product goals

- Present a credible, premium and internationally oriented corporate identity.
- Explain IT, Non-IT and partnership services using the terminology in the corporate profile.
- Generate structured project, partner, vendor and strategic partnership enquiries.
- Support partner expression of interest, eligibility review and capability assessment.
- Give internal teams a controlled admin workflow for applications, enquiries and documents.
- Keep the platform extensible for CRM, scheduling, analytics and future partner ecosystem features.

2. Business Model and Positioning

Core positioning

US-focused business positioning | IT & Non-IT project solutions | Strategic partnerships. The website should communicate the platform's role in connecting capable delivery partners with clearly defined opportunities, measurable execution standards and transparent commercial arrangements.

Three business pillars

Pillar	Website message / capability
Project solutions	International project requirement discovery, validation, scoping and coordination across IT and Non-IT domains.
Partner ecosystem	Vendor discovery, qualification, due diligence, staffing alignment, onboarding and delivery capability assessment.
Governance and growth	Commercial alignment, delivery reporting, quality assurance, continuous improvement and long-term partnerships.

Target audiences

- International businesses seeking IT, Non-IT or operational delivery capabilities.
- Established Indian IT organizations and software delivery companies.
- BPO, healthcare-process, banking-operations and back-office providers.

- Established enterprises considering strategic merger, integration or other partnership discussions.

3. Main Corporate Profile – Content to Preserve

The following content is the baseline for the website and must not be silently replaced by generic marketing claims.

Profile topic	Source-derived requirement
Company overview	US-oriented IT and Non-IT project solutions and partnership platform; connects international requirements with qualified delivery organizations in India and other markets.
Vision	Build a trusted international ecosystem where qualified technology and operations companies can access scalable project opportunities.
Mission	Enable disciplined project execution through partner screening, structured onboarding, operational governance and outcome-based delivery.
IT services	ERP, web applications, business portals, custom software, cloud and infrastructure support, application testing, maintenance and digital transformation.
Non-IT operations	Medical coding, medical billing, healthcare support processes, data entry, document processing, banking KYC, mortgage processing, mutual-fund operations support and back-office services.
Partnership services	Vendor discovery, capability assessment, staffing alignment, project allocation coordination, reporting, quality assurance and commercial engagement support.
Delivery model	International demand → requirement validation → partner due diligence → project scoping and contracting → delivery and QA → reporting and continuous improvement.
Hyderabad	Proposed as a key partner and delivery ecosystem; additional locations and cross-border operations require confirmation.

The source profile also identifies proposed screening thresholds, engagement pathways, illustrative project categories, proposed/reported Hyderabad relationship references and required initial partner-submission materials. These are detailed in the following sections.

4. Brand Identity, Logo and Design System

Official logo usage

- Use the exact supplied CoralSwift logo as the primary identity asset.
- Preserve the symbol, wordmark, proportions, gradient and clear space; do not redraw, stretch or recolour it.
- Use a high-resolution transparent PNG or SVG master if available; the supplied raster logo is acceptable for initial mockups but should be replaced by a production-quality asset.
- Create approved light-background, dark-background and compact favicon variants without changing the original identity.
- Place the logo in the header, footer, portal login, admin login, email templates and downloadable corporate materials.

Logo-inspired colour palette (proposed digital tokens)

Token	HEX	Use
Coral orange	#F98F33	Accent, highlights
Bright coral	#F05E47	CTA and interactive accents
Rose	#E73B50	Active states and visual emphasis
Magenta	#D21D61	Gradient accent
Purple	#950B6D	Gradient endpoint
Midnight navy	#080B2E	Primary text, header/footer
Secondary navy	#25294D	Supporting text
White / soft grey	#FFFFFF / #F5F6FA	Main and alternate backgrounds
Warm white	#FFF7F2	Warm callout panels

Signature gradient

```
linear-gradient(120deg, #F98F33 0%, #F05E47 30%, #E73B50 55%, #D21D61 78%, #950B6D 100%)
```

Visual language: Swift Flow

- Use flowing ribbon-like shapes inspired by the logo to suggest movement, connectivity and forward progress.
- Use subtle global network lines and restrained US–India connection motifs.
- Keep the overall interface white and navy-led; reserve gradient for CTA buttons, section accents, icons and selected illustrations.
- Use Manrope for headings and Inter for body text and controls.
- Use subtle transitions, card hover states and scroll reveals; respect reduced-motion settings.

5. Information Architecture and Sitemap

Main navigation	Pages / supporting routes
Home	Hero, company overview, service summary, delivery model, why partner, CTA.
About	Company overview, vision, mission, philosophy, operating approach.
Services	IT services, Non-IT/business operations, partnership services.
Partnerships	Global-to-local model, partner pathways, become a partner, engagement process.
Project Opportunities	Illustrative project categories and project enquiry form.
Strategic Discussions	Merger / integration discussion and confidential enquiry.
Insights	Articles, industry information and resource centre.
Contact	General enquiry, project enquiry, partnership enquiry.
Utility/legal	Privacy, terms, cookie notice, data protection notice, partner guidelines, 404.

Recommended header CTA: **Become a Partner**. Footer should include verified contact details, quick links, service categories and legal links.

6. Homepage – Detailed Requirements

Header and navigation

Sticky white header with logo, responsive menu, clear active state and a prominent Become a Partner CTA.

Hero section

Headline: “Connecting Global Opportunities with the Right Delivery Partners.” Supporting text must describe the US-focused positioning and qualified delivery partner model without claiming unverified offices or active contracts. CTAs: Explore Solutions; Become a Partner; Discuss an Opportunity.

Company introduction

“Technology. Operations. Partnerships. Growth.” Explain the platform's business-development and delivery-partnership model.

Service overview

Three clear cards: IT Services; Non-IT / Business Operations; Partnership Services.

Global-to-local delivery

Show the six source-profile stages: international demand, requirement validation, partner due diligence, project scoping and contracting, delivery and QA, reporting and continuous improvement.

Why partner

Emphasize structured qualification, transparent commercial arrangements, governance, measurable quality and sustainable relationships.

Partner pathways

Explain strategic merger/integration discussions, direct project engagement and vendor/subcontracting partnership as separate routes.

Final CTA

Invite companies to request an eligibility review or confidential introductory discussion.

Footer

Logo, brand line, navigation, verified contact channels and legal notices.

7. Service Portfolio and Detail Pages

IT services

- Enterprise resource planning (ERP).
- Web applications and business portals.
- Custom software development.
- Cloud and infrastructure support.
- Application testing and maintenance.
- Digital transformation.

Non-IT / business operations

- Medical coding and medical billing.
- Healthcare support processes.
- Data entry and document processing.
- Banking KYC and mortgage processing.
- Mutual-fund operations support.
- Back-office services.

Partnership services

- Vendor discovery and capability assessment.
- Staffing alignment and project allocation coordination.
- Reporting and quality assurance.
- Commercial engagement support.

Every service detail page should contain: service summary, typical use cases, capability description, engagement approach, information required for an enquiry, relevant disclaimer and CTA. Do not claim certifications or regulated compliance status unless verified.

8. Partner Eligibility and Engagement Pathways

Proposed screening criteria from the corporate profile

Criteria	Source-profile threshold / evidence
Business age	At least 3 years of established operations.
Workforce	Minimum 50 employed candidates/personnel, supported by verifiable payroll or statutory records.
Direct project allocation	Minimum annual turnover of INR 2 crore, supported by audited financial statements or equivalent verifiable documentation.
Additional assessment	Delivery history, technical capabilities, compliance, data security, management strength, client references and commercial fit.

These are proposed screening requirements, not a promise of merger approval or project award. Display them clearly as proposed criteria and allow administrators to record exceptions or project-specific requirements only through an approved internal process.

Three engagement pathways

Pathway	Description
Strategic merger / integration discussion	For qualifying organizations seeking a deeper structural relationship, subject to legal, financial and operational due diligence.
Direct project engagement	For financially established partners meeting the INR 2 crore turnover threshold and project-specific qualifications.
Vendor / subcontracting partnership	For companies demonstrating relevant domain skills and service-level compliance, subject to separate commercial approval.

Initial partner submission checklist

- Company registration proof.
- Three-year operating history.
- Employee-strength evidence.
- Latest financial statements.
- Service portfolio.
- Infrastructure summary.
- Two client references.
- Authorized contact details.

9. Project Opportunities – Illustrative Categories

Present these as sample categories only, not as live contracts or awarded projects.

- **Enterprise ERP implementation:** HRMS, finance, workflow automation, reporting and integrations.
- **Web and application development:** corporate portals, customer-facing applications, APIs, QA and support.
- **Healthcare operations:** medical coding, billing and related documentation workflows with client-defined quality controls.
- **Financial process operations:** KYC review, mortgage documentation, mutual-fund data processing and reconciliation.
- **High-volume document operations:** data entry, XML conversion, indexing, verification and quality control.

Each opportunity category should have a structured enquiry form requesting business need, scope, estimated volume, required skills, expected timeline, geography, security constraints and supporting documents, where relevant.

10. Proposed / Reported Partner References – Publication Control

The source profile lists the following organizations as proposed or reported relationship references. It explicitly states that relationship type, legal names, signed agreements and project-allocation histories are pending verification.

- OPMW (One Place Multi Work).
- VPD Technologies Private Limited.
- Sivion Global Technologies (name supplied as “Sevian”).
- Aapthi / “Aptic” (legal entity to confirm).
- Micro D (legal entity to confirm).
- Medha (legal entity to confirm).
- Alboriss / “Albaris” (legal entity to confirm).

Publication rule: Do not show these names as confirmed partners, clients, vendors or project recipients until the legal entity and relationship are verified and written permission to publish is obtained. Keep them in a private validation register until approval.

11. End-to-End User Journeys

Journey	User steps	System response
Business / project enquiry	Visit services → choose category → describe requirement → submit contact details and optional documents.	Validate form, create enquiry ID, route to correct queue, send acknowledgement, notify assigned team.
Partner application	Review criteria → complete company profile → upload evidence → consent → submit.	Create application record, validate files, acknowledge receipt, queue for reviewer.
Partner review	Reviewer checks eligibility and capability → requests missing items or records assessment.	Record reviewer, notes, status, date and requested documents; notify applicant.
Strategic discussion	Read M&A; / integration page → submit confidential enquiry.	Restrict access to authorized roles, create confidential record and alert designated owner.
Admin follow-up	Staff open dashboard → assign owner → update status → add notes → schedule follow-up.	Maintain audit trail, send permitted notifications and include activity in reports.

Application and project evaluation workflow

- Expression of interest: company profile, service portfolio and preferred engagement model.
- Eligibility verification: incorporation date, employee count and turnover where applicable.
- Capability review: infrastructure, domain expertise, team structure, references and information security.
- Commercial and legal review: scope, pricing, confidentiality, intellectual property, responsibilities and payment terms.
- Pilot / onboarding: controlled kickoff with delivery milestones and acceptance criteria.
- Scale-up: expand assignments based on performance, capacity and client demand.

12. Public Website Forms and Functional Requirements

Form	Required data / behavior
General contact	Name, company, business email, phone, country, enquiry type, message; spam protection and acknowledgement.
Project enquiry	Company/contact details, IT or Non-IT category, requirement summary, scope, timeline, volume if relevant, geography, optional file.
Partner application	Legal company name, year established, website, registered address, contact, workforce, turnover range, service categories, client experience, infrastructure, preferred model, supporting documents.
Strategic discussion	Company and authorized contact details, business overview, nature of merger/integration/partnership interest, confidential summary and optional documents.
Meeting request (add-on)	Preferred dates/time zone, meeting purpose, contact details; only confirm a meeting after calendar availability is checked.

- Client-side and server-side validation.
- Clear field labels, helper text and accessible error messages.
- Country-aware phone field and business email validation.
- File size/type restrictions and secure upload handling.
- Privacy notice and explicit consent where required.
- Submission reference number and confirmation screen.
- Rate limiting, bot/spam protection and duplicate-submission handling.

13. Partner Portal – Phase 2

Partner access

- Secure sign-in and password reset.
- Multi-factor authentication for privileged users; consider for partners.
- Role-based access and session expiry.
- Partner profile and application status view.

Partner dashboard

- Company profile and completion indicator.
- Application status and reviewer messages.
- Submitted documents and additional document requests.
- Notifications and enquiry history.
- Profile update requests and change history.

Document handling

Company documents must be stored privately, not in public web folders. Apply file type and size restrictions, malware scanning where available, access controls, audit logging, retention rules and secure deletion.

14. Admin Console and Internal Operations – Phase 3

Dashboard modules

- Overview and recent activity.
- Partner applications and qualification review.
- Business and project enquiries.
- Strategic / M&A; enquiries with restricted permissions.
- Partner database and document review.
- Lead assignment, follow-ups and communication history.
- Website pages, insights and content approval.
- User roles, notification templates and system settings.
- Reports, CSV export and audit logs.

Roles and permissions

Role	Access
Super Administrator	System configuration, users, roles and all records.
Business Development Manager	Business/project enquiries, assignment, follow-ups and partnership discussions.
Partner Reviewer	Partner applications, evidence review, eligibility notes and status updates.
Content Administrator	Draft and publish approved website content and articles.

Apply least-privilege access. Confidential M&A; enquiries and financial documents should have more restrictive permissions than general contact enquiries.

15. Recommended Add-ons – Expanded Scope

A. Trust and credibility centre

- Verified company credentials and approved leadership profiles.
- Clear explanation of partner review and verification process.
- Case studies, testimonials, client logos and certifications only with evidence and permission.
- Downloadable corporate profile with version/date and validated facts.

B. Smart lead qualification and routing

- Conditional forms based on enquiry type.
- Lead source, category, priority, owner, status and next follow-up date.
- Automatic routing to business development, partner review or restricted strategic queue.
- Enquiry reference ID and acknowledgement email.

C. FAQ and self-service centre

- FAQs on proposed partner criteria, required documents, review stages and engagement pathways.
- Searchable knowledge articles and clear support contact.
- Accessible help and form guidance.

D. Meeting scheduling

- Optional calendar integration for introductory discussions.
- Time-zone-aware slots for international contacts.
- Meeting confirmation only after real calendar booking.
- Reschedule and cancellation links, if supported.

E. Corporate resource centre

- Insights and article categories.
- Downloadable capability statements and approved documents.
- Search, tags, related content and newsletter opt-in.
- Editorial approval and publication dates.

F. CRM and productivity integrations

- Optional CRM sync for leads and partner records.
- Transactional email provider integration.
- Private cloud file storage.
- Calendar, analytics and support-ticket integrations.

G. International readiness

- US and India time-zone display where useful.
- USD/INR references only where approved; no hard-coded live exchange rate.
- Country-aware contact fields.
- Future multilingual support if justified by audience demand.

H. Governance and security add-ons

- Admin audit trail and access logs.
- Content approval workflow.
- Data retention and deletion controls.
- Backup restoration tests and incident response process.
- Cookie consent and analytics preferences where legally required.

I. Future ecosystem features – Phase 4

- Approved partner directory with opt-in visibility.
- Partner capability filters by domain, location and capacity.
- Partner performance scorecards based on agreed, auditable measures.
- Workflow automation and advanced management reporting.
- Secure client/partner collaboration workspace only after requirements and access model are defined.

16. Non-Functional Requirements

Area	Requirement
Responsive design	Desktop, laptop, tablet and mobile layouts; no horizontal overflow.
Performance	Optimized images, lazy loading, caching, CDN and efficient scripts; monitor Core Web Vitals.
Accessibility	Target WCAG 2.2 AA; keyboard navigation, contrast, focus, labels and accessible errors.
Security	HTTPS, secure authentication, role-based access, input validation, rate limits, protected uploads and logging.
Reliability	Monitoring, backups, recovery procedures and documented incident ownership.
SEO	Unique metadata, semantic headings, sitemap, robots rules, structured data where appropriate and canonical URLs.
Maintainability	Documented code, environment separation, version control, automated tests and controlled deployments.
Privacy	Collect only necessary data; disclose purposes, retention, sharing and cross-border processing.

17. Recommended Technical Architecture

Layer	Recommended direction
Frontend	Next.js / React with TypeScript; responsive component system.
Design system	Reusable components, design tokens based on logo palette, accessible UI primitives.
Backend	Node.js or equivalent maintained backend with documented REST APIs.
Database	PostgreSQL for users, applications, enquiries, workflow status and audit metadata.
Authentication	Secure authentication, role-based permissions and MFA for privileged users.
File storage	Private object storage with signed access, scanning and retention controls.
Email	Authenticated transactional email with SPF, DKIM and DMARC.
Hosting	Managed cloud hosting, CDN, staging and production environments.
Observability	Error monitoring, uptime checks, logs and alerting.
Delivery	Git repository, code review, CI/CD, automated tests and rollback plan.

The technology stack is a recommendation, not a final vendor commitment. Confirm hosting region, data processing terms, budget, support capability and integration costs before selection.

18. Core Data Model – Initial Entities

Entity	Key fields (illustrative)
Company	Company ID, legal name, website, year established, address, country, business category.
Contact	Contact ID, company ID, name, role, business email, phone, consent record.
Partner application	Application ID, company ID, services, workforce range, turnover band, preferred pathway, status, submitted date.
Document	Document ID, owner record, storage key, type, upload date, reviewer, access classification, retention date.
Enquiry	Enquiry ID, category, company/contact, summary, source, priority, owner, status, created date.
Review	Review ID, application ID, reviewer, checklist results, notes, decision and timestamp.
Activity	Activity ID, user, record type, record ID, action, timestamp and metadata.
Notification	Notification ID, recipient, template, delivery status, timestamp.

This is a starting logical model. Final schema, retention, access controls and audit requirements must be confirmed during technical design.

19. Security, Privacy and Compliance

- Use HTTPS and secure cookie/session settings.

- Apply role-based access and least-privilege permissions.
- Require strong authentication; enable MFA for administrators and reviewers.
- Validate and sanitize inputs; protect against common web application attacks.
- Restrict upload types and sizes; scan files where available.
- Keep partner, financial and strategic documents private.
- Maintain audit logs for access, status changes, downloads and administrative actions.
- Define data retention, deletion, correction and access-request processes.
- Use spam protection and rate limiting on public forms.
- Maintain encrypted backups and test restoration.

The website must not claim HIPAA, SOC 2, ISO, PCI or other certification/compliance unless the relevant organization, systems and controls have been assessed and the claim is authorized. Healthcare and financial service categories in the profile do not by themselves establish compliance status.

20. SEO, Analytics and Measurement

SEO baseline

- Unique page titles and descriptions.
- Search-friendly URLs and internal linking.
- XML sitemap and robots.txt.
- Organization structured data only for verified entity information.
- Image alt text and social-sharing metadata.
- Useful, original content and clear service descriptions.

Analytics events

- Service page views and CTA clicks.
- Contact and project enquiry starts/submissions.
- Partner application starts/completions.
- Application status progression.
- Meeting requests and confirmed bookings.
- Traffic source and device category, subject to consent requirements.

Business KPIs

- Qualified enquiries by category and source.
- Partner application completion rate.
- Share of applications meeting initial screening criteria.
- Enquiry response and follow-up time.
- Conversion from enquiry to qualified discussion.
- Portal adoption and document review turnaround.

Set numerical targets only after a baseline is available and staffing capacity is understood.

21. QA, Testing and Acceptance Criteria

Testing scope

- Functional testing for every page, link, CTA and form.
- Validation testing for required fields, email, phone and uploads.
- Role and permission tests for each user type.
- Security tests for authentication, authorization and file access.

- Responsive testing across current major browsers and device sizes.
- Accessibility checks for keyboard, contrast, focus and screen-reader labels.
- Performance checks and Core Web Vitals monitoring.
- Email delivery and failure-state testing.
- Backup restoration and deployment rollback rehearsal.

Release acceptance

- Approved logo and brand system are implemented.
- All Phase 1 pages are complete and content is validated.
- All public forms work and route to the correct destination.
- Acknowledgement and internal notification emails are tested.
- Privacy, terms and cookie notices are approved and published.
- No critical or high-severity defects remain open.
- Mobile, accessibility, SEO and performance checks are signed off.
- Monitoring, backups and named operational owners are in place.

22. End-to-End Project Delivery Plan

Stage	Activities	Deliverables / exit gate
0. Discovery	Confirm legal brand, objectives, audiences, service content, operating process, stakeholders and scope.	Approved discovery notes, scope, assumptions and content checklist.
1. UX and brand	Logo asset preparation, design tokens, sitemap, wireframes, responsive prototypes and content design.	Approved design system, page prototypes and content map.
2. Build Phase 1	Develop public pages, forms, CMS/content capability, SEO and analytics foundation.	Staging website, tested forms and content review.
3. QA and launch	Functional, responsive, accessibility, performance, security and content checks; domain and deployment setup.	Launch approval, production release, monitoring and rollback plan.
4. Build Phase 2	Partner registration, login, profile, secure uploads, reviewer workflow and notifications.	Partner portal acceptance and access-control sign-off.
5. Build Phase 3	Admin console, lead pipeline, assignment, follow-ups, reports, roles and audit logs.	Operational dashboard acceptance and staff training.
6. Phase 4 evolution	Partner directory, automation, integrations, analytics and collaboration features.	Prioritized enhancement releases.

Project workstreams

- Product owner: requirements, priorities, decisions and acceptance.
- Brand/content owner: logo, claims, copy, legal and corporate validation.
- UX/UI: information architecture, wireframes, responsive design and accessibility.
- Engineering: frontend, backend, database, integrations and deployment.
- QA/security: test plans, defects, access control and release checks.
- Operations: enquiry ownership, partner review process, email handling and support.

Project management controls

- Maintain a prioritized backlog and change log.
- Approve scope changes before implementation.
- Track risks, dependencies, decisions and open questions.
- Use separate development, staging and production environments.
- Require code review and release approval.
- Provide handover documentation and administrator training.

23. Release Priorities and Scope Boundaries

Release	Included scope	Priority
Phase 1 – Public website	Brand system, core pages, service portfolio, delivery model, contact/project/partner enquiry forms, legal pages, SEO and analytics.	Must have
Phase 2 – Partner portal	Secure partner registration, company profile, document submission, status tracking and reviewer workflow.	Should have
Phase 3 – Admin platform	Enquiry/lead management, assignment, follow-ups, partner database, roles, reporting and audit logs.	Should have
Phase 4 – Extended ecosystem	Approved partner directory, capability filters, advanced analytics, automation and collaboration features.	Could have

Out of scope unless separately approved: payment processing, contract e-signature, live project marketplace, automated partner scoring that makes final decisions, public disclosure of partner documents, full ERP/CRM replacement, regulated healthcare/financial processing systems and guaranteed project allocation.

24. Risks, Dependencies and Mitigations

Risk / dependency	Mitigation
Unverified company or US presence claims	Validate legal entity, registration and locations; use cautious wording until confirmed.
Partner names or relationships are unverified	Keep references private until legal names, relationship type and publication permission are documented.
No confirmed live projects	Label categories illustrative; never imply active contracts or guaranteed allocation.
Sensitive partner documents	Use private storage, least-privilege access, audit trails and retention controls.
Unclear enquiry ownership	Assign a named business owner and response process before launch.
Scope expansion	Use phased releases, backlog prioritization and formal change approval.
Email deliverability	Configure authenticated sending domain and test templates/delivery.
Regulatory or privacy obligations	Obtain jurisdiction-specific review before collecting or processing sensitive data.

25. Open Decisions Before Development

- Confirm exact legal entity name and public-facing brand spelling: Coral Swift or CoralSwift Technologies.
- Confirm whether a US-registered entity or office exists; otherwise retain US-focused positioning only.
- Confirm registered address, official domain, business email and authorized contact number.
- Confirm whether Hyderabad is only a proposed partner ecosystem or an established operating location.
- Verify the legal names and relationship status of all proposed/reported partner references.
- Confirm whether the 3-year, 50-personnel and INR 2 crore criteria apply uniformly or by engagement pathway.
- Name the person/team responsible for general, project, partner and confidential strategic enquiries.
- Approve the public partner application document list and privacy/retention policy.
- Choose hosting, email, CRM, calendar and private file-storage providers.
- Approve final website copy, legal notices, logo files and launch date.

26. Final Product Definition

The Coral Swift digital platform will begin as a premium corporate website that accurately communicates the US-focused IT and Non-IT project solutions and strategic partnership model described in the corporate profile. It will present the service portfolio, global-to-local delivery model, proposed partner qualification criteria, engagement pathways and illustrative project categories.

The platform will then expand into a secure partner portal and internal administration system, enabling structured company submissions, eligibility verification, capability review, enquiry routing, commercial follow-up and reporting.

Brand line: Connecting Global Opportunities with Delivery Excellence.

Brand principles: Technology • Operations • Partnerships • Growth

The platform's credibility depends on disciplined publication controls: verify company and geographic details, partner relationships, project history, certifications and contact information before presenting them as facts. The corporate profile's draft/validation status must be respected until those checks are complete.

27. Corporate Profile-to-PRD Traceability and Gap Closure

This consolidated master PRD retains the business information in the Coral Swift Corporate Profile and maps it to buildable website and platform requirements. The original corporate profile is the business-content baseline; this PRD is the implementation specification. The following traceability table confirms that each source-profile topic has a corresponding product requirement.

Corporate profile content	Where it is implemented in this PRD	Status / build requirement
Company overview, US-focused positioning	Sections 1–2, 6	Included. Publish US-focused positioning only; do not imply a verified US office or registration without evidence.
Vision and mission	Sections 1, 3, 6	Included. Use approved copy consistently on About and Home pages.
IT, Non-IT and partnership services	Sections 3, 7	Included. Build dedicated service category/detail pages and enquiry routing.
Global-to-local six-stage delivery model	Sections 3, 6, 11	Included. Show all six stages as a process visual and repeat them in partner/project journeys.
Hyderabad partner ecosystem	Sections 3, 10, 24–25	Included with verification control. Do not present Hyderabad as a Coral Swift office unless confirmed.
Merger / strategic partnership screening thresholds	Section 8	Included. Present as proposed screening criteria, not guaranteed approval or project allocation.
Three engagement pathways	Sections 8, 11–12	Included. Give each pathway a distinct CTA and conditional form route.
Illustrative project opportunity categories	Section 9	Included. Label as examples only, not active or awarded contracts.
Proposed/reported partner references	Sections 10, 24–25	Included in internal validation context only. Public listing requires legal-name, relationship and permission verification.
Six-step project allocation evaluation	Sections 11, 21–22	Included. Implement as partner review workflow and reviewer checklist.
Why partner benefits	Sections 1, 2, 6, 15	Included. Present as value propositions, not guarantees of work or revenue.
Partnership enquiry and initial submission checklist	Sections 8, 12, 13	Included. Partner form must support all eight requested evidence categories and secure document upload.
Official contact details and important disclosure	Sections 3, 12, 24–25	Included as launch dependencies. Add only verified email, domain, address and authorized representative.

28. Additional Requirements Made Explicit in This Consolidated PRD

The previous master PRD covered the main platform architecture and add-ons. The following requirements are now made explicit as acceptance-level details so they are not lost during design or development:

• **Source-content fidelity:** Maintain a content register mapping each public claim to an owner and evidence status. Flag every claim as verified, pending verification, illustrative or prohibited from publication.

• **Distinct conversion paths:** Separate general contact, project enquiry, direct project engagement, vendor/subcontracting partnership and strategic merger/integration enquiry. Route each to the correct internal owner.

• **Partner submission completeness:** Capture registration proof, three-year operating history, employee-strength evidence, latest financial statements, service portfolio, infrastructure summary, two client references and authorized contact details.

• **Eligibility rules engine:** Display the proposed 3-year operating history, 50-personnel and INR 2 crore turnover thresholds with conditional applicability by pathway. Store evidence and reviewer outcome; do not auto-approve or auto-reject solely from a form value.

• **Project allocation workflow:** Track expression of interest, eligibility verification, capability review, commercial/legal review, pilot/onboarding and scale-up as separate statuses with timestamps, owners and notes.

• **Confidentiality:** Strategic merger/integration submissions and uploaded financial records must be access-restricted, excluded from public search and handled under an approved retention policy.

• **Partner ecosystem publication gate:** Partner names, logos, relationship descriptions, project histories and testimonials require legal-name verification and written publication permission.

• **Project listing safeguards:** Any sample opportunity must carry an “illustrative category” label unless the business owner confirms a live, approved opportunity and its publication terms.

• **Contact readiness:** Launch is blocked until the official domain, business email, registered address (if to be displayed), phone number and authorized representative are confirmed or intentionally omitted.

• **Operational service levels:** Define internal response-time targets, queue owners, escalation rules and out-of-office coverage before enabling automated acknowledgement promises.

• **Content governance:** Every page needs an owner, reviewer, last-reviewed date and approval status; outdated claims and downloadable PDFs must be version-controlled.

• **Form failure handling:** Prevent silent submission failures; preserve safe user-entered data where appropriate, show retry guidance and alert administrators when notifications or integrations fail.

• **Data minimization:** Do not request sensitive personal health, patient, banking or financial account data through public forms. Collect only business-level capability information at the enquiry stage.

29. Detailed Acceptance Checklist for the Business Owner

Area	Acceptance check
Brand	Approved logo source file, brand spelling, gradient tokens, favicon and light/dark usage approved.
Corporate facts	Legal entity, jurisdiction, US positioning, Hyderabad status and public contact details verified.
Partner claims	Every named partner, client, vendor, project allocation, testimonial and logo approved for publication or omitted.
Services	IT, Non-IT and partnership service descriptions reviewed by accountable business owners.
Criteria	3-year, 50-personnel and INR 2 crore thresholds confirmed, including which pathway each applies to.
Forms	All five enquiry/application routes tested, secure uploads verified, consent captured and correct owners notified.
Workflow	Six project allocation stages and reviewer decisions represented in portal/admin status model.
Privacy/security	Privacy notice, retention schedule, access roles, secure storage, audit trail and incident owner approved.
Operations	Named queue owners, acknowledgement wording, response targets and escalation process approved.
Launch	Content sign-off, accessibility, performance, security, SEO, backup, monitoring and rollback checks complete.

30. Final Consolidation Note

This PDF is the single consolidated master PRD. It combines the Corporate Profile business content, the prior end-to-end website PRD, the logo-led design system, the recommended add-ons, the portal/admin scope, technical and non-functional requirements, the phased delivery plan, and the traceability and gap-closure requirements above. Developers should work from this document as one specification and manage approved changes through a versioned backlog.

Important: This document does not verify the underlying business facts. The business owner must approve and evidence legal identity, locations, partner relationships, project availability, certifications, contact information and any regulated-service claims before publication.
